

Eastern Region Climate Web Page Transition Information

The National Weather Service is implementing new standards of design and content for its climate web pages across the nation, in order to ease customer access and service, much like the standard design of the Weather Forecast Office home pages. This change will take place in the NWS Eastern Region on September 26, 2005. In order to ensure a smooth transition, a template has been developed that will enable customers to find information on the new web pages, based on where it was found on the old web pages. In addition, customers will be pointed to new climate information from a variety of sources that was not available on the old climate web pages. To use this template, customers should read down the left column to find the climate category they are interested in, then check the right column to see where that information is now located.

Product Description:
DAILY CLIMATE REPORT - issued daily.
Detailed daily weather statistics (usually for yesterday),
including temperature, precipitation, degree days, wind,
humidity, sunrise/sunset, and record temperature data
for the following day. Precipitation data includes both
forecasts.

The official source
for climate data is the
National Climatic
Data Center.

To provide comments on this service, please fill out this survey [Climate Feedback](#).
